Art Unit: 1771

1. The obviousness-type double patenting is withdrawn in view of the terminal disclaimer filed on 04/14/2006.
2. The terminal disclaimer filed on 04/14/2006 is sufficient to exclude the co-pending Application No. 10/018,708 which is now US Patent 7,040,963 used in a 103 rejection under the 103 (c) exclusion. US Patent 7,040,963 is qualified as prior art under 102(e).
3. The 103 art rejections based on WO 99/38651 are maintained.
4. The 112 claim rejections, second paragraph are withdrawn in view of the present amendment.

Terminal Disclaimer

5. The terminal disclaimer filed on 04/14/2006 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of US Patent Application 10/018,708 has been reviewed and is accepted. The terminal disclaimer has been recorded.

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.
7. Claims 43-46, and 48-55 are rejected under 35 U.S.C. 103(a) as being unpatentable over WO 99/38651 in view of Tsukada (US 4,846,673) substantially as set forth in the 11/14/2005 Office Action. The art rejections have been

maintained for the following reasons. Applicants argue that WO '651 does not teach or suggest a polishing apparatus wherein an upper layer forming a part of a fluid passage. The examiner respectfully disagrees. The examiner directs Applicants' attention to figure 1 of WO '651. The wafer grinder table comprises a lower plate 30 and an upper plate 34 that forms a part of the fluid passage in the vertical direction from bottom to top of the apparatus as shown in figure 1.

Applicants further argue that the combined teachings of WO '651 and Tsukada do not achieve the claimed invention, namely the metal silicone forming bonding layers that are continuous and have no boundaries. The examiner respectfully disagrees. It appears that Tsukada was using the same approach to form the metal silicon bonding layers as Applicants; i.e., impregnating the sintered porous body with the metal silicon, therefore, it is the examiner's position that the metallic silicon bonding layer would be inherently continuous and have no boundaries as the same techniques have been employed. Accordingly, the art rejections are sustained.

Conclusion

8. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory

Art Unit: 1771

period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
